Experience /projects

Learning Management System for BIT during internship program

- I Developed a comprehensive Learning Management System (LMS) using the MERN stack (MongoDB, Express.js, React.js, Node.js). The system facilitates online course management, user registration, and content delivery, enhancing the educational experience for students and instructors.

Utility Payment System

- I Created a utility payment application using Java with MySQL for backend database management. This system allows users to conveniently pay their utility bills online, featuring secure transactions and user-friendly interfaces.

AI-Based Traffic Violation Detection and Alerting System

- For Graduate project We Developed an AI-based system to detect traffic violations using image processing and machine learning techniques. The system analyzes real-time video feeds to identify violations, sending alerts to authorities for prompt action.
